## MODELS

In the interests of user-safety (Required by safety regulations in some countries) the set should be restored to its original condition and only parts identical to those specified be used.

## PRECAUTIONS IN PART REPLACEMENT

*When servicing the unit with power on, be careful to the section marked white all over.*

*This is the primary power circuit which is live.*

When checking the soldering side in the tape travel mode, make sure first that the tape has been loaded and then turn over the PWB with due care to the primary power circuit.

Make readjustment, if needed after replacement of part, with the mechanism and its PWB in position in the main frame.

### **(1) Start and end sensors: Q701 and Q702**

Insert the sensor's projection deep into the upper hole of the holder. Referring to the PWB, fix the sensors tight enough.

### **(2) Photocoupler: IC901 and IC902**

Refer to the symbol on the PWB and the anode marking of the part.

### **(3) Cam switches A and B: S704.**

Adjust the notch of the part to the white marker of the symbol on the PWB. Do not allow any looseness.

### **(4) Take-up and supply sensors: D706 and D707.**

Be careful not to confuse the setting direction of the parts in reference to the symbols on the PWB. Do not allow any looseness.

# 1. SPECIFICATIONS

Format:	VHS PAL/NTSC standard
Video recording system:	Rotary, slant azimuth two heads helical scan system
Video signal:	PAL colour or monochrome (CCiR system B/G) signals
Recording/playing time:	240 min max. with SHARP E-240 tape (PAL: SP mode) 480 min max. with SHARP E-240 tape (PAL: LP mode) 720 min max. with SHARP E-240 tape (PAL: EP mode) 160 min max. with SHARP T-160 tape (NTSC: SP mode) 480 min max. with SHARP T-160 tape (NTSC: EP mode)
Tape width:	12.7mm
Tape speed:	23.39 mm/s (PAL: SP mode) 11.70 mm/s (PAL: LP mode) 7.8 mm/s (PAL: EP mode) 33.35 mm/s (NTSC: SP mode) 16.67 mm/s (NTSC: LP mode) 11.12mm/s (NTSC: EP mode)
Antenna:	75 ohm unbalanced
Receiving channel:	VHF Channel NZ1 - NZ11, UHF Channel E21 - E69 (for New Zealand) VHF Channel AU0 - AU12, UHF Channel AU28 - AU69 (for Australia)
RF converter output signal:	UHF Channel E21 - E69 Adjustable preset to E36 (for New Zealand) UHF Channel AU28 - AU69 Adjustable preset to AU37 (for Australia)
Power requirement:	AC230V $\pm$ 15% , 50Hz (for New Zealand) AC240V $\pm$ 10% , 50Hz (for Australia)
Power consumption:	Approx. 14W
Operating temperature:	5°C to 40°C
Storage temperature:	-20°C to 55°C
Weight:	Approx. 2.4 kg (VC-A310X/NZ,H725X) Approx. 2.7 kg (VC-H730X/NZ)
Dimensions:	360 mm (W) x 229 mm (D) x 92 mm (H) (VC-A310X/NZ,H725X) 430 mm (W) x 227 mm (D) x 92 mm (H) (VC-H730X/NZ)
VIDEO	
Input:	1.0 Vp-p, 75 ohm
Output:	1.0 Vp-p, 75 ohm
S/N ratio:	45dB min (PAL-SP)
Horizontal resolution:	250 lines min (PAL-SP)
AUDIO 0 dBs = 0.775 Vrms	
Input:	Line 1:-8 dBs/47k ohm
Input:	Line 2:-8 dBs/47k ohm (VC-H725X, H730X/NZ)
Output:	Line -8 dBs/1k ohm
S/N ratio:	43dB min (SP mode) (VC-A310X/NZ, H725X) 45dB min (SP mode) (VC-H730X/NZ)
Frequency response:	80 Hz ~ 10 kHz (SP mode) 80 Hz ~ 5 kHz (LP mode) 80 Hz ~ 3 kHz (EP mode)
Hi-Fi Dynamic Range:	85dB min
Hi-Fi Wow and Flutter:	0.005% Max.
Hi-Fi Frequency response:	20Hz ~ 20kHz
Hi-Fi Distortion:	0.5% Max.
Hi-Fi Crosstalk:	55 dB min
Accessories included:	75 ohm coaxial cable Operation manual Infrared remote control Battery

As part of our policy of continuous improvement, we reserve the right to alter design and specifications without notice.
--

Note: The antenna must correspond to the new standard DIN 45325 (IEC 169 - 2) for combined UHF/VHF antenna with 75 ohm connector.

## 2. DISASSEMBLY AND REASSEMBLY

### 2-1 DISASSEMBLY OF MAJOR BLOCKS

(VC-A310X/NZ, H725X)

- TOP CABINET** : Remove 2 screws ①.
- FRONT PANEL** : Remove 2 screws ② and 7 clips ③.
- MECHANISM/**  
**MAIN PWB** : Remove 2 screws ④, 1 screw ⑤.  
Remove 2 screws ⑥ and 1 screw ⑦  
with antenna terminal cover. Remove  
1 screw ⑧ with top cabinet fix angle.

(VC-H730X/NZ)

**TOP CABINET  
FRONT PANEL  
MECHANISM/  
MAIN PWB**

- : Remove 2 screws ①.
- : Remove 2 screws ② and 7 clips ③.
- : Remove 2 screws ④, 1 screw ⑤, and antenna terminal cover. Remove 2 screws ⑥ and mechanism chassis. Remove 1 screw ⑦ and top cabinet fix angle.

**CASSETTE  
HOUSING  
CONTROL**

- : Remove 2 screws ⑧.

## 2-3 CARES WHEN REASSEMBLING

### INSTALLING THE CASSETTE HOUSING

When the cassette housing is installed on the mechanism, the initial setting is essential condition.

There are two initial setting methods, namely electrical and mechanical.

#### 1. Electrical initial setting

So as to perform initial setting of mechanism execute the Step 1 of Installation of cassette housing. After ascertaining the return to the initial setting position install the cassette housing. (Conditions: When mechanism and PWB have been installed)

#### 2. Mechanical initial setting

- Rotate the worm gear by pushing the flange manually until return to initial position.

Rotate the flange of worm gear by using thin stick.  
CW ••• Loading direction  
CCW ••• Ejection direction

Note:

Be careful not to damage the gear of worm gear and worm wheel gear. It might cause a strange sound.

- When apply power supply to rotate the loading motor, please remove/unsolder at least one terminal wire.
- If voltage applied to loading motor without diconnecting the terminal wire, there is a possibility the capstan motor IC will damage.
- The maximum applied voltage is 9V. If more than 9V, there is apossibility the mechanism will damage.
- After ascertaining the return to the initial set position install the cassette housing in the specified position. (This method is applied only for the mechanism.)

### INSTALLING THE MECHANISM ON PWB

Lower vertically the mechanism, paying attention to the mechanism edge mode SW position, (Set the mode SW position to 270° and make sure the master cam position hole also in 270° position) and install the mechanism with due care so that the parts are not damaged.

\* Please make sure to insert correctly.

If not, strange moving will occur and will cause mechanism damage.

### PARTS WHICH NEED PARTICULAR CARE

When installing the mechanism chassis on the PWB unit, take care so as to prevent deformation due to contact of mechanism chassis with REC TIP SW.

### 3. FUNCTION OF MAJOR MECHANICAL PARTS (TOP VIEW)

No.	Function	No.	Function
1	Full erase head	11	Reverse guide lever ass'y
2	Supply pole base ass'y	12	Reel relay gear
3	Tension arm	13	Take-up reel disk
4	Idler wheel ass'y	14	Pinch roller lever ass'y
5	Open guide	15	Drum ass'y
6	Supply reel disk	16	Loading motor block
7	Supply main brake	17	Drum driver motor
8	Take-up main brake	18	Take-up pole base ass'y
9	Pinch drive cam	26	Auto head cleaner Ass'y
10	A/C head ass'y		

FUNCTION OF MAJOR MECHANICAL PARTS (BOTTOM VIEW)

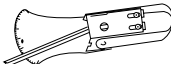

No.	Function	No.	Function
19	Syncro Gear	23	Clutch lever
20	Master cam	24	Limiter pulley ass'y
21	Capstan D.D. motor	25	Shifter
22	Reel belt		

## 4. ADJUSTMENT, REPLACEMENT AND ASSEMBLY OF MECHANICAL UNITS

The explanation given below relates to the on-site general service (field service) but it does not relate to the adjustment and replacement which need high-grade equipment, jigs and skill. For example, the drum assembling, replacement and adjustment service must be performed by the person who have finished the technical courses.

### 4-1 MECHANISM CONFIRMATION ADJUSTMENT JIG

So as to perform completely the mechanism adjustment prepare the following special jigs. So as to maintain the initial performance of the machine the maintenance and check are necessary. Utmost care must be taken so that the tape is not damaged. If adjustment needs any jig, be sure to use the required jig.

No.	Jig Item	Part No.	Code	Configuration	Remarks			
1.	Torque Cassette Meter	JiGVHT-063	CZ		This cassette torque meter is used for checking and adjusting the torque of take-up for measuring tape back tension.			
2.	Torque Gauge	JiGTG0090	CM		These Jigs are used for checking and adjusting the torque of take-up and supply reel disks.			
		JiGTG1200	CN					
3.	Torque Gauge Head	JiGTH0006	AW					
4.	Torque Driver	JiGTD1200	CB		When fixing any part to the threaded hole using resin with screw, use the jig. (Specified torque 5 kg)			
5.	Master Plane Jig and Reel Disk Height Adjusting Jig	JiGRH0002	BR		These Jigs are used for checking and adjusting the reel disk height.			
		JiGMP0001	BY					
6.	Tension Gauge	JiGSG2000	BS		There are two gauges used for the tension measurements, 300 g and 2.0 kg.			
		JiGSG0300	BF					
7.	Pinch pressing force measuring jig	JiGADP003	BK		This Jig is used with the tension gauge. Rotary transformer clearance adjusting jig.			
8.	Alignment Tape	VROCPSV	CK		These tapes are especially used for electrical fine adjustment.			
					Video	Audio	HiFi Audio	Track
					625 Monoscope	7k	—	49 μm
9.	Guide roller height adjustment driver	JiGDRI VERH-4	AP		This screwdriver is used for adjusting the guide roller height.			
10.	X value adjustment gear driver	JiGDRI VER-6	BM		For X value adjustment			
11.	Tension Pole Adjustment Driver	JiGHMEC-M005			This Jig is used for adjustment of tension pole.			

## 4-2 MAINTENANCE CHECK ITEMS AND EXECUTION TIME

Perform the maintenance with the regular intervals as follows so as to maintain the quality of machine.

Maintained Parts	500 hrs.	1000 hrs.	1500 hrs.	2000 hrs.	Possible symptom encountered	Remarks
Guide roller ass'y	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	Lateral noises Head occasionally blocked	Abnormal rotation or significant vibration requires replacement.
Sup guide shaft	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		Clean tape contact part with the specified cleaning liquid.
Reverse guide	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
Slant pole on pole base	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>		
Full erase head	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="radio"/>	Colour and beating	Clean tape contact area with the specified cleaning liquid.
A/C head	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="radio"/>	Small sound or sound distortion	
Upper and lower drum ass'y	<input type="checkbox"/>	<input type="radio"/>	<input type="radio"/>	<input type="radio"/>	Poor S/N ratio, no colour Poor flatness of the envelope with alignment tape	
Capstan D.D. motor	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	No tape running, uneven colour	
Pinch roller	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	No tape running, tape slack	Clean rubber and rubber contact area with the specified cleaning liquid.
Reel belt		<input type="checkbox"/>		<input type="radio"/>	No tape running, tape slack, no fast forward/ rewind motion	
Tension band ass'y				<input type="radio"/>	Screen swaying	
Loading motor				<input type="radio"/>	Cassette not loaded or unloaded	
Idler ass'y				<input type="radio"/>	No tape running, tape slack	
Limiter pulley		<input type="checkbox"/>		<input type="checkbox"/>		
Supply/take-up main brake levers				<input type="radio"/>	Tape slack	

NOTE    ☐ : Part replacement.    ☐ : Cleaning     : Apply grease  
<Specified> Cleaning liquid Industrial ethyl alcohol

\* This mechanism does not need electric adjustment with variable resistor. Check parts. If any deviation is found, clean or replace parts.

### Video head cleaning procedure

1. Apply one drop of cleaning liquid to the cleaning paper with the baby oiler.
2. Gently press the cleaning paper against the video head to fix your finger, and move the upper drum so that each head is passed to and fro 5 times (do not move the cleaning paper).
3. Wipe with the dry cleaning paper.

#### Notes :

- Use the commercially available ethanol of Class 1 as cleaning liquid.
- Since the video head may be damaged, do not move up and down the cleaning paper.
- Whenever the video head is cleaned, replace the cleaning paper.
- Do not apply this procedure for the parts other than the video head.

Rotate the upper drum  
with one hand.  
Gently press the cleaning paper to  
fix with your finger, and rotate the  
upper drum to clean.  
Move to and fro 5 times for each head.  
(Do not move the cleaning paper.)

Parts Code	Description	Code
ZPAPRA56-001E	Cleaning Paper	AW
ZOILR-02-24TE	Babe Oiler (Spoit)	AH

## 4-3 REMOVING AND INSTALLING THE CASSETTE HOUSING

### • Removal

1. In the cassette removing mode, remove the cassette.
2. Unplug the power cord.
3. Remove in the following numerical order.
  - a) Remove two screws ①.
  - b) Pull and circle the drive lever and pull up the cassette housing control.

Figure 4-1.

### • Reassembly

1. Before installing the cassette housing control, short-circuit between TP803 and TP802 provided at main PWB, press the eject button. The master cam turns and stop in eject position. Fit the drive lever to master cam through main chassis, push down and slide the drive lever towards to master cam.

\*Eject position: Pinch Drive Cam positioning hole parallel to center of Synchro Gear (Synchro gear marking line). Synchro Gear positioning mark parallel to center of master cam.

Figure 4-2.

2. Install in the reverse order of removal.

### Notes

1. In the case when you use the magnet screw driver, never approach the magnet driver to the A/C head, FE head, and drum.
2. When installing or removing, take care so that the cassette housing control and tool do not contact the guide pin or drum.
3. After installing the cassette housing control once perform cassette loading operation.

## 4-4 TO RUN A TAPE WITHOUT THE CASSETTE HOUSING CONTROL ASSEMBLY

1. Remove the full-surface panel.
2. Short-circuit between TP803 and TP802.
3. Plug in the power cord.
4. Turn off the power switch.  
(The pole bases move into U.L. position.)
5. Open the lid of a cassette tape by hand.
6. Hold the lid with two pieces of vinyl tape.
7. Set the cassette tape in the mechanism chassis.
8. Stabilize the cassette tape with a weight (500g) to prevent floating.

Figure 4-3.

9. Turn on the power switch.
10. Perform running test.

### Note:

The weight should not be more than 500g.

To take out the cassette tape.

1. Turn off the power switch.
2. Take out the cassette tape.

## 4-5 REEL DISK REPLACEMENT AND HEIGHT CHECK

### • Removal

1. Remove the cassette housing control assembly.
2. Remove the Supply/Take-up main brake ass'y.
3. Remove tension band from the tension arm ass'y.
4. Remove the reel disk.

### Note:

Take care so that the tension band ass'y and main brake ass'y are not deformed.

### • Reassembly (Supply reel disk)

1. Clean the reel disk shaft and apply grease (SC-141) to it.
2. Match the phases of reel disk and reel relay gear, and set the new reel disk.
3. After checking the reel disk height, wind the tension band ass'y around the reel disk, and hook to tension arm ass'y.
4. Assemble the Supply main brake ass'y.

### Notes:

1. When installing the reel disk, take due care so that the tension band ass'y is not deformed and grease does not adhere.
2. Do not damage the Supply main brake ass'y. Be careful so that grease does not adhere to the brake surface.

### • Reassembly (Take-up reel disk)

1. Clean the reel disk shaft and apply grease (SC-141) to it.
2. Align the phase of the reel disk to that of the reel relay gear and to install a new take-up reel disk onto the shaft.
3. Check the reel disk height and reassemble the take-up main brake ass'y.

### Note:

1. Take care so that the Take-up main brake ass'y is not damaged. Take care so that grease does not adhere the brake surface.
2. After reassembly, check the video search rewind back tension (see 4-10), and check the brake torque (see 4-14).

### • Height checking and adjustment

#### Note:

1. Set the master plane with due care so that it does not contact the drum.
2. When putting the master plane, shift the reverse guide a little in the loading direction. Care must be taken since excessive shift results in damage.

Figure 4-4.

### Note:

- Check that the reel disk is lower than part A but higher than part B. If the height is not correct, readjust the reel disk height by changing the poly-slider washer under the reel disk.

**Note:**

Whenever replacing the reel disk, perform the height checking and adjustment.

Figure 4-5.

#### 4-6 CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN FAST FORWARD MODE

- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.

- **Setting**

1. Set a torque gauge to zero on the scale. Place it on the take-up reel disk.
2. Press the FF button.
3. To calculate the remaining capacity of the play back mode, slowly rotate the supply reel disk, and then shift it into the forward mode.

- **Checking**

1. Turn the torque gauge slowly (one rotation every 2 to 3 seconds) by hand in the CW direction.
2. Make sure that the indication of torque gauge is not less than 30mN·m (306gf·cm).

Figure 4-6.

- **Adjustment**

1. If the FF winding-up torque is less than the specified value, clean the capstan D.D. pulley, reel belt, and limiter pulley with cleaning liquid, and check again.
2. If the torque is less than the set value, replace the reel belt.

**Notes:**

1. Hold the torque gauge by hand so that it is not moved.
2. Do not keep the reel disk in lock state. Do not allow long-time measurement.

#### 4-7 CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN REWIND MODE

- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.

- **Setting**

1. Set a torque gauge to zero on the scale. Place it on the supply reel disk.
2. Press the rewind button.
3. To calculate the remaining capacity, slowly rotate the take-up reel disk, and then shift it into the rewind mode.

- **Checking**

1. Turn the torque gauge slowly (one rotation every 2 to 3 seconds) by hand in the CCW direction.
2. Make sure that the indication of torque gauge is not less than 30mN·m (306gf·cm).

Figure 4-7.

- **Adjustment**

1. If the rewind winding-up torque is less than the specified value, clean the capstan D.D. pulley, reel belt, and limiter pulley with cleaning liquid, rewind again, and check the winding-up torque.
2. If the winding-up torque is still out of range, replace the drive belt.

**Notes:**

1. Hold the torque gauge by hand so that it is not moved.
2. Do not keep the reel disk in lock state. Do not allow long-time measurement.

#### 4-8 CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN RECORD/PLAYBACK MODE

- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.
- Turn off the power switch.
- Open the cassette torque meter lid, and fix it with tape.
- Load the cassette torque meter into the unit.
- Put the weight (500g) on the cassette torque meter.
- Turn on the power switch.
- Press the picture record button, and set LP picture record mode (x2).

Set value LP  $6.9 \begin{smallmatrix} +2.0 \\ -2.5 \end{smallmatrix} \text{mN}\cdot\text{m}$  ( $70 \begin{smallmatrix} +20 \\ -25 \end{smallmatrix} \text{gf}\cdot\text{cm}$ )

**Figure 4-8.**

• **Checking**

1. Make sure that value is within the setting  $6.9 \begin{smallmatrix} +2.0 \\ -2.5 \end{smallmatrix} \text{mN}\cdot\text{m}$  ( $70 \begin{smallmatrix} +20 \\ -25 \end{smallmatrix} \text{gf}\cdot\text{cm}$ ).
2. The winding-up torque fluctuates due to variation of rotation torque of limiter pulley ass'y. Read the center value of fluctuation as setting.
3. Set the LP record mode (x2) and make sure that the winding-up torque is within setting.

• **Adjustment**

If the playback winding-up torque is not within the setting, replace the limiter pulley assembly.

**Note:**

When the torque cassette is set, put a weight (500g) to prevent rise.

When the cassette torque meter is taken out.

Turn off the power switch.

#### 4-9 CHECKING AND ADJUSTMENT OF TAKE-UP TORQUE IN VIDEO SEARCH REWIND MODE

- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.

• **Setting**

Press the playback button and rewind button to set the video search rewinding mode.

• **Checking**

Place the torque gauge on the supply reel disk, and turn it counterclockwise very slowly (one rotation every 1 to 2 seconds) and check that the torque is within the set value  $14.1 \pm 3.5 \text{mN}\cdot\text{m}$ . ( $144 \pm 35 \text{gf}\cdot\text{cm}$ )

**Figure 4-9.**

**Note:**

Surely put the torque gauge on the reel disk to measure. If the torque gauge is raised, accurate measurement is impossible.

• **Adjustment**

If the rewinding playback winding-up torque is not within the setting, replace the limiter pulley assembly.

**Note:**

The winding-up torque fluctuates due to variation of rotation torque of supply reel disk. Read the center value of fluctuation as setting.

#### 4-10 CHECKING THE VIDEO SEARCH REWIND BACK TENSION

- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.
- **Checking**
  1. After pressing the play button, press the rewind button, and set the video search rewind mode.
  2. Place the torque gauge on the take-up reel disk, and turn it counterclockwise very slowly (one rotation every 2 to 3 seconds) and check that the torque is within the set value  $3.7 \pm 1.5\text{mN}\cdot\text{m}$  ( $38 \pm 15\text{gf}\cdot\text{cm}$ ).

Figure 4-10.

#### Notes:

Set the torque gauge securely on the take-up reel disk. If it is not secure, the measurement will be incorrect.

#### 4-11 CHECKING THE PINCH ROLLER PRESSURE

- **Checking can be perform with or without cassette housing control.**
- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.
- **Checking**  
Press the play button to set the playback mode.
  1. Detach the pinch roller from the capstan shaft. Do not separate excessively. Or the pinch lever and pinch double action lever may disengage.
  2. Engage the tension gauge adapter with the pinch roller shaft, and pull in the arrow direction.
  3. Gradually return the pinch roller, and measure the pulling force when the pinch roller contacts the capstan shaft.
  4. Make sure that the measured value is within setting change to  $9.8 \pm 2\text{N}$  ( $1.0 \pm 0.2\text{kgf}$ ).

Figure 4-11.

#### 4-12 CHECKING AND ADJUSTMENT OF TENSION POLE POSITION

- **Checking can be perform with or without cassette housing control.**
- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.
- **Setting (without cassette housing control)**
  1. Turn off the power switch.
  2. Open the cassette tape (E-180), and fix with tape.
  3. Set the cassette tape in loading state.
  4. Put the weight (500g) on the cassette tape.
  5. Turn on the power switch.
  6. Make the adjustment with the beginning of a E-180 tape.
- **Setting (with cassette housing control)**
  1. Insert cassette tape (E-180).
  2. Make the adjustment with the beginning of a E-180 tape.

Figure 4-12.

- **Checking**

1. Set a cassette tape, push the REC button to place the unit in the SP record mode. Now check the tension pole position.
2. Visually check to see if the position of the tension pole is within the  $0 \pm 0.5$  mm from the left side line.

Standard A =  $0 \pm 0.5$  mm  
 $-0.2$

Make the adjustment with the beginning of a E-180 tape.

**Figure 4-13.**

At left side from the reference line. (A).

**Figure 4-14.**

Insert the tension pole adjustment driver to main chassis hole, and rotate clockwise.

At right side from the reference line. (A).

**Figure 4-15.**

Insert the tension pole adjustment driver to main chassis hole, and rotate counterclockwise.

Tension pole adjustment driver adjusting direction

**Figure 4-16.**

## 4-13 CHECKING AND ADJUSTMENT OF RECORD/PLAYBACK BACK TENSION

\* Checking can be perform with or without cassette housing control.

- Remove the cassette housing control assembly.
- After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.
- **Setting (without cassette housing control)**
  1. Turn off the power switch.
  2. Open the cassette torque meter and fix with tape.
  3. Set the cassette torque meter in loading state.
  4. Put the weight (500g) on the cassette torque meter.
  5. Turn on the power switch.
- **Setting (with cassette housing control)**
  1. Insert cassette torque meter.

**Figure 4-17.**

- **Checking**

1. Push the REC button to place the unit in the SP record mode.
2. At this time ascertain that the back tension is within the setting 3.9 to 5.5mN·m (40 to 56gf·cm) by seeing the indication of torque cassette meter.

- **Adjustment**

1. If the indication of torque cassette meter is lower than the setting, shift the tension spring engagement to the part A.
2. If the indication of torque cassette meter is higher than the setting, shift the tension spring engagement to the part B.

Figure 4-18.

#### 4-14 CHECKING THE BRAKE TORQUE

- **Checking the brake torque at the supply side**

CCW:	$4.41 \pm^{+2.0}_{-1.5} \text{ mN}\cdot\text{m}$	$(45 \pm^{+20}_{-15} \text{ gf}\cdot\text{cm})$
CW:	$4.12 \pm^{+1.5}_{-1.2} \text{ mN}\cdot\text{m}$	$(42 \pm^{+15}_{-12} \text{ gf}\cdot\text{cm})$

Figure 4-19.

- **Remove the cassette housing control assembly.**

- **After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.**

- **Setting**

1. Set a torque gauge to zero on the scale. Place it on the supply reel disk.
2. Switch from the FF mode to the STOP mode.
3. Disconnect the power cord.
4. Please check Idler gear not contact with reel relay gear (SU side)

- **Checking**

Turn the torque gauge at a rate of about one turn/2 sec in the CW direction/CCW direction with respect to the supply reel disk so that the reel disk and torque gauge pointer rotate at equal speed, and make sure that the value is within the setting (CW direction:  $4.12 \pm^{+1.5}_{-1.2} \text{ mN}\cdot\text{m}$  ( $42 \pm^{+15}_{-12} \text{ gf}\cdot\text{cm}$ ); CCW direction:  $4.41 \pm^{+2.0}_{-1.5} \text{ mN}\cdot\text{m}$  ( $45 \pm^{+20}_{-15} \text{ gf}\cdot\text{cm}$ )).

- **Checking the brake torque at the take-up side**

CCW:	$4.41 \pm^{+2.0}_{-1.5} \text{ mN}\cdot\text{m}$	$(45 \pm^{+20}_{-15} \text{ gf}\cdot\text{cm})$
CW:	$4.12 \pm^{+1.5}_{-1.2} \text{ mN}\cdot\text{m}$	$(42 \pm^{+15}_{-12} \text{ gf}\cdot\text{cm})$

Figure 4-20.

- **Remove the cassette housing control assembly.**

- **After short-circuiting between TP803 and TP802 provided at main PWB, plug in the power cord.**

- **Setting**

1. Switch from the FF mode to the STOP mode.
2. Disconnect the power cord.
3. Set a torque gauge to zero on the scale. Place it on the take-up reel disk.
4. Please check Idler gear not contact with reel relay gear (TU side)

- **Checking**

1. Turn the torque gauge at a rate of about one turn/2 sec in the CCW direction/CW direction so that the reel disk and torque gauge pointer rotates at equal speed and make sure that the value is within the setting (CCW direction:  $4.41 \pm^{+2.0}_{-1.5} \text{ mN}\cdot\text{m}$  ( $45 \pm^{+20}_{-15} \text{ gf}\cdot\text{cm}$ ), CW direction:  $4.12 \pm^{+1.5}_{-1.2} \text{ mN}\cdot\text{m}$  ( $42 \pm^{+15}_{-12} \text{ gf}\cdot\text{cm}$ )).

2. Adjustment of the brake torque at the supply side and the take-up side

- Unless the supply side brake torque or take-up side brake torque is within the setting, clean the felt surface of reel disk (supply, take-up) brake lever, check again the brake torque.
- If value cannot be set within the setting yet, replace the main brake ass'y or main brake spring.

## 4-15 REPLACEMENT OF A/C (AUDIO/CONTROL) HEAD

1. In eject position unplug the power cord.

### • Removal

1. Take out FFC holder from main chassis.  
(Push 3 hooking point and pull-up the holder).
2. Remove the screws ① ② ③, Tilt screw.
3. Unsolder the PWB fitted to the A/C head.

### Notes:

1. When replacing, never touch the head. If you touched, clean with the cleaning liquid.
2. When removing the screw ③, take care so that the spring may out.

Figure 4-21.

### • Replacement

1. Solder the removed PWB to the new head assembly.
2. Adjust the height from the A/C head arm (lower surface) to the A/C head plate to 10.8mm with slide calipers. (3 places of azimuth screw section, tilt screw section and A/C head front section) (See the figure below.)

Figure 4-22.

3. Align the left end of gear of A/C head arm with the punched mark of chassis, tentatively tighten the screws ① so as to ensure smooth motion of A/C head arm. Tightening torque must be  $0.45 \pm 0.05\text{N}\cdot\text{m}$  ( $4.5 \pm 0.5\text{kgf}\cdot\text{cm}$ ).

Figure 4-23.

### Note:

1. If the screw ① is tighten tentatively too loose, the azimuth and height of A/C head may change when they are finally tightened. Therefore care must be taken.
2. After completion of A/C head be sure to adjust tape running. (Execute the running adjustment by the method described in 4-17.)

## 4-16 A/C HEAD HEIGHT ROUGH ADJUSTMENT

### • Setting

Figure 4-24.

1. Set the cassette tape in the unit.
2. Press the PLAY button to put the unit in the playback mode.
3. Roughly adjust the height of the A/C head by turning the height screw until the tape is in the position shown below.

Figure 4-25.

### • Adjustment

Adjust the height screw visually so that the control head is visible 0.3mm below the bottom of the tape.

## 4-17 ADJUSTMENT OF TAPE DRIVE TRAIN

### 1. Tape run rough adjustment

- ① Check and adjust the position of the tension pole. (See 4-12.)
- ② Check and adjust the video search rewind back tension. (See 4-10.)
- ③ Connect the oscilloscope to the test point for PB ATR signal output (TP201). Set the synchronism of the oscilloscope to EXT. The PB ATR signal is to be triggered by the head switching pulse (TP202).
- ④ Set the alignment tape (VROCPSV) to play.

Figure 4-26.

- ⑤ Press the tracking button (+), (-) and change the ATR signal waveform from max to min and from min to max. At this time make sure that the ATR signal waveform changes nearly parallel.
  - ⑥ Unless the ATR signal waveform changes nearly parallel, adjust the height of supply side and take-up side guide roller so that the envelope waveform changes nearly parallel. (For ATR signal adjustment procedure refer to Figure 4-30.)
  - ⑦ Turn the tilt screw to remove the tape crease at the fixing guide flange. Playback the tape and check for tape crease at the fixing guide flange.
    - (1) If there is no tape crease  
Turn the tilt screw clockwise so that tape crease appears once at the flange, and then return the tilt screw so that the crease disappears.
    - (2) If there is tape crease  
Turn counterclockwise the tilt screw so that the tape crease disappears.
- (Reference) If the tilt screw is turned clockwise crease appears at the lower flange.

**Notes:**

1. Previously set the tracking control in the center position, and adjust the ATR signal waveform to maximum with X value adjustment nut. Thereby the tape run rough adjustment is facilitated.
2. Especially the outlet side ATR signal waveform must have higher flatness.

**Figure 4-27.**

2. Adjustment of A/C head height and azimuth

- ① Perform the initial setting of A/C head position by the method stated in "4-15 Replacement 3" .
- ② Connect the oscilloscope to the audio output terminal.
- ③ Using the alignment tape in which 1 kHz linear audio signal has been recorded, adjust the height screw so as to get max audio output.
- ④ Using the alignment tape in which 7 kHz linear audio signal has been recorded, adjust the azimuth screw so as to get max audio output.
- ⑤ The adjustment of ③ and ④ twice or three times repeat, and finally adjust ④.

For X value adjustment  
Adjust the X value, turning the gear-type screwdriver.

**Figure 4-28.**

3. Tape run adjustment

- ① Connect the oscilloscope to PB ATR signal output test point, set oscilloscope sync to EXT, trigger-input the PB CHROMA signal (head switching pulse).
- ② Rough adjustment of X value  
Tentatively fix A/C head arm screws ① by the method described in 4-15 " Replacement 3" .  
Playback the alignment tape (VROCPSV) and shortcircuit between TP801 and TP802. As a result the auto-tracking is automatically cancelled, so that the X value adjustment mode is set.  
Move the A/C head with the X value adjustment gear driver (JiGDRIVER-6) by the method shown in Figure 4-33, and adjust the A/C head so as to get the maximum ATR signal waveform. (Note: When the A/C head is adjusted, adjust so that the maximum ATR signal waveform is obtained nearest the position of initial setting made in 4-15.)

- ③ Next, press the tracking button (+), (−) and change the ATR signal waveform from max to min and from min to max. At this time adjust the height of supply and take-up side guide roller with the adjustment driver (JiGDRIVERH-4) so that the ATR signal waveform changes nearly parallel.
- ④ If the tape is lifted or sunk from the helical lead surface, the PB ATR signal waveform appears as shown in Figure 4-30.
- ⑤ Press the tracking button (+), (−) and make sure that the ATR signal waveform changes nearly parallel.
- ⑥ Finally, check tape crease near the reverse guide. If tape crease is found, adjust tilt screw 45° counter clockwise. Small tape crease will appear at retain guide after this adjustment finished.

PB ATR  
Signal**Head switching pulse****Figure 4-29.**

#### 4. A/C head X value adjustment

- ① Fix A/C head arm screws ① by the method described in 4-15 " Replacement 3" .
- ② Playback the alignment tape (VROCPSV), and shortcircuit between TP801 and TP802. As a result the auto-tracking is automatically cancelled, so that the X value adjustment mode is set.

	When the tape is above the helical lead.		When the tape is below the helical lead.	
	Supply side	Take-up side	Supply side	Take-up side
Adjustment	Supply side guide roller rotated in clockwise direction (lowers guide roller) to flatten ATR signal.	Take-up side guide roller rotated in clockwise direction (lowers guide roller) to flatten ATR signal.	Supply side guide roller rotated in counterclockwise direction (raises guide roller) to make the tape float above the helical lead. The supply side guide roller is then rotated in the clockwise direction to flatten the ATR signal.	Take-up side guide roller rotated in counterclockwise direction (raises guide roller) to make the tape float above the helical lead. The take-up side guide roller is then rotated in the clockwise direction to flatten the ATR signal.

**Figure 4-30.**

- ③ Move the A/C head with the X value adjustment gear driver by the method shown in Figure 4-33, and adjust the A/C head so as to get the maximum ATR signal waveform. (Note: At this time adjust so as to get the maximum ATR signal waveform nearest the A/C head position which has been set in case of X value rough adjustment as stated in 4-17, 3- ②.)
- ④ Adjust the playback switching point (Refer to the electric adjustment method.)
- ⑤ Playback the self-picture-recorded tape, and check the flatness of ATR signal waveform and sound.

#### Notes:

When the A/C head X value adjustment is performed, be sure to perform at first X value rough adjustment (refer to 4-17, 3-②).

**Figure 4-31.**

#### 4-18 REPLACEMENT OF THE CAPSTAN D.D. (DIRECT DRIVE) MOTOR

- Remove the mechanism from the set.
- Removal (Follow the order of indicated numbers.)**
  - Unsolder loading motor wire and drum FFC .
  - Remove the reel belt ①.
  - Remove the three screws ②.
- Reassembly**

Figure 4-32.

- Taking care so that the capstan shaft does not contact the mechanism chassis, set its position on the mechanism chassis, and then install with the three screws.
- Install the reel belt.
- Solder loading motor wire and insert drum FFC .

##### Notes:

- After installing the capstan D.D. motor, be sure to rotate the capstan D.D. motor and check the movement.
- Set the tape, and check for the tape crease near the reverse guide in the playback mode. Adjust the A/C head and azimuth as stated in 4-17 item 2.

#### 4-19 REPLACEMENT OF DRUM D.D. MOTOR

- Set the ejection mode.
- Withdraw the main power plug from the socket.

##### Removal (Perform in numerical order.)

- Disconnect the FFC cable ①.
- Unscrew the D.D. stator assembly fixing screws ②.
- Take out the D.D. stator assembly ③.
- Unscrew the D.D. rotor assembly fixing screws ④.
- Take out the D.D. rotor assembly ⑤.

##### Notes:

- In removing the D.D. stator assembly, part of the drum earth spring pops out of the pre-load collar. Be careful not to lose it.
- Install, so that the D.D. rotor ass'y and upper drum ass'y mounting direction check holes align. (Align the upper drum dent with the rotor hole.)
- Be careful not to damage the upper drum or the video head.
- Protect the hole elements from shock due to contact with D.D. stator or D.D. rotor ass'y.
- After installation adjust the playback switching point for adjustment of servo circuit.

Figure 4-33.

## 4-20 REPLACING THE UPPER AND LOWER DRUM ASSEMBLY

- Replacement (Perform in the numerical order)
  - ① Remove the motor as stated in 4-19 D.D. motor replacement.
  - ② Remove the drum earth brush ass'y ②.
  - ③ Remove the upper and lower drum assembly from main chassis ①.
  - ④ Remove the drum FFC holder ③.

### [Cares when replacing the drum]

1. Be careful so that the drum earth brush is not lost.
2. Do not touch directly the drum surface.
3. Fit gently the screwdriver to the screws.
4. Since the drum assembly is an extremely precise assembly, it must be handled with utmost care.
5. Make sure that the drum surface is free from dust, dirt and foreign substances.
6. After replacing the drum be sure to perform the tape running adjustment.  
After that, perform also the electrical adjustment.
  - Playback switching point adjustment
  - X-position adjustment and check
  - Standard and x-3 slow tracking adjustment
7. After replacing the drum clean the drum.

Lower drum bottom side

Figure 4-34.

## 4-21 ASSEMBLING OF PHASE MATCHING MECHANISM COMPONENTS

- Assemble the phase matching mechanism components in the following order.
  1. Assemble the reverse guide lever and pinch drive cam.
  2. Mounting the shifter (on the back of the mechanism chassis).
  3. Mounting the master cam (on the back of the mechanism chassis).
  4. Assemble synchro gear.
  5. Assemble the loading motor parts.

### • PINCH DRIVE CAM AND REVERSE GUIDE LEVER ASSEMBLING METHOD.

(Place the following parts in position in numerical order.)

- (1) Pinch drive cam ①
- (2) Reverse guide spring ②
- (3) Reverse guide lever ass'y ③
- (4) Open guide ④

Figure 4-35.

From Top View

## 4-22 INSTALLING THE SHIFTER

(Bottom side of mechanism chassis)

Figure 4-36.

1. Make sure that the loading arm T and S are at the Phase-Matching point as shown below (a).
2. Fix the shifter position setting part to the loading arm T position setting part as shown in figure (b).
3. Make sure tension arm not run on the shifter as shown in figure (c).

Figure 4-37.

#### 4-23 INSTALLING THE MASTER CAM (AT REAR SIDE OF MECHANISM CHASSIS)

1. Make sure beforehand that the shifter is at initial position. (Right side from bottom view)
2. Place the master cam in the position as shown below.
3. Fix the E ring.

Figure 4-38-1.

4. Adjust the master cam and pinch drive cam, fix the synchro gear in correct position.

#### Note:

See the figure below for the phase matching between the master cam synchro gear and pinch drive cam.

Figure 4-38-2.

#### 4-24 REPLACEMENT OF LOADING MOTOR

##### • Removal

Figure 4-39.

##### • Replacement

Remove the loading motor, and install the replacement loading motor as shown below.

Figure 4-40.

The loading motor pressing-in must be less than 196N (20 kgf).

Adjust the distance between motor and pulley to  $6.95^{+0}_{-0.15}$  mm.

## 4-25 ASSEMBLY OF CASSETTE HOUSING

### 1. Proof lever Proof lever spring and Holder R

\*Proof lever spring fixing direction designated.

Figure 4-41.

### 2. Open lever, Sensor Plate and Frame R

Figure 4-42.

### 3. Spring to Drive Arm R

Figure 4-43.

4 Frame R, Frame L, Drive Arm R, Drive Arm L, Upper Plate.

Figure 4-44.

- Before the adjustment:  
Electrical adjustments discussed here are often required after replacement of electronic components and mechanical parts such as video heads.  
Check that the mechanism and all electric components are in good working condition prior to the adjustments, otherwise adjustments can not be completed.

- Instruments required:
  - Colour TV monitor
  - Dual-trace oscilloscope
  - Alignment tape (VROCPSV), (VROATSV)
  - Blank video cassette tape
  - DC voltmeter
  - Screwdriver for adjustment

When the IC710 (E<sup>2</sup>PROM) has been replaced, make the following reprogramming. Depending on models, the IC710 (E<sup>2</sup>PROM) has been factory-adjusted for it's memory function.  
It's therefore necessary to reprogram the memory function for the model in question.  
Note that the servo circuit requires readjustments for the head switching point, slow and still modes.

- **Location of controls and test points**

**Figure 5-1.**

## SERVO CIRCUIT ADJUSTMENT

### ADJUSTMENT OF HEAD SWITCHING POINT

Measuring instrument	Dual-trace oscilloscope Colour TV monitor
Mode	Playback
Cassette	Alignment tape (VROFBZD)
Test point	Pin(2) of TP201 (H.SW.P.) to CH-1, VIDEO OUT jack to CH-2 (CH-1 trigger slope switch at (+), Internal trigger at CH-1 side.)
Specification	$6.5 \pm 0.5H$ (lines)

1. Remove the front panel and play the alignment tape. (VROFBZD)
2. Get TP801 short circuited or press "TEST" key (47H) at universal remote control to call the Test Mode. (LCD will blinking as tracking goes to center)
3. Press "PLAY" .  
Auto PG Mode will be ON and playback mark "▶" blinking.
4. Press "STOP" .  
"▶" blinking stops and auto adjustment finished.
5. Check that V-Sync is  $6.5 \pm 0.5H$  and the waveform is as shown in Figure 5-2.

#### Note:

For manual PG adjustment, press FF or REW at the Test Mode to set the tracking in center.

Figure 5-2.

### ADJUSTMENT OF PAL SYSTEM SP/LP/EP SLOW TRACKING PRESET

Measuring instrument	Colour TV monitor
Mode	Playback
Cassette	Self-recorded tape (SP/LP/EP mode)(See Note below)
Control	Tracking control buttons (▲) or (▼)
Specification	Minimized noise on monitor screen

1. Have the unit to receive a good TV broadcast or feed a video signal to the VIDEO IN jack. (See note ② below)
2. Set the tape speed in SP mode by using the remote control and record the signal on tape.
3. Rewind and play the tape where signal was recorded in above step.
4. Press the SLOW button on the remote control, and playback the recorded portion in the slow mode.
5. Make for a moment short-circuit TP801, located at the front side on the main PWB.  
Be sure that all the LCD display light up when press the TEST mode.
6. Look at the monitor screen and adjust the (▲) or (▼) TRACKING buttons until there is minimum or no noise appear on the screen.
7. Press the STOP button to return to normal mode.
8. Play the tape a few seconds then press the SLOW button again and make sure there is minimum or no noise on the screen.(For the LP/EP mode there are the same adjustmet as SP mode.)

#### Notes:

- ① Self-recorded tape means a cassette whose program was recorded by the unit being adjusted.
- ② The TV program will not be recoded if RCA or 21pin plugs are plugged in the AUDIO/VIDEO input terminals.
- ③ The tracking control is enabled with the (▲)/(▼) button.

## ADJUSTMENT OF PAL SYSTEM FV (False Vertical Sync) OF STILL PICTURE

Measuring instrument	Colour TV monitor
Mode	Playback still
Cassette	Self-recorded tape (SP/LP/EP mode) (See Note below ①)
Control	Tracking control buttons (▲) or (▼)
Specification	No vertical jitter of picture

1. Play a cassette which was recorded by the unit in SP mode.
2. Press the PAUSE/STILL button to freeze the picture.
3. Adjust (▲) or (▼) TRACKING buttons until the vertical jitter of the picture minimized.
4. Play and freeze the self-recorded tape in SP mode and make sure vertical jitter of the picture is not noticeable.(For the LP/EP mode adjustment is the same as at SP mode.)

### Note:

- ① Self-recorded tape is a cassette which program was recorded by the unit being adjusted.
- ② The tracking control is enabled with the (▲)/(▼) button.

## ADJUSTMENT OF NTSC SYSTEM SP/EP SLOW TRACKING PRESET

Measuring instrument	Colour TV monitor
Mode	Playback
Cassette	Self-recorded tape (SP/EP mode)(See Note below)
Control	Tracking control buttons (▲) or (▼)
Specification	Minimized noise on monitor screen

1. Have the unit to receive a good TV broadcast or feed a video signal to the VIDEO IN jack. (See note ② below)
2. Set the tape speed in SP mode by using the remote control and record the signal on tape.
3. Rewind and play the tape where signal was recorded in above step.
4. Press the SLOW button on the remote control, and playback the recorded portion in the slow mode.
5. Make for a moment short-circuit TP801, located at the front side on the main PWB.  
Be sure that all the LCD display light up when press the TEST mode.

6. Adjust the (▲) or (▼) TRACKING buttons until there is minimum or no noise appear on the screen.
7. Press the STOP button to return to normal mode.
8. Play the tape a few seconds then press SLOW button again and make sure there is minimum or no noise on the screen.(For the E P mode adjustment is the same as SP mode.)

### Notes:

- ① Self-recorded tape is a cassette which program was recorded by the unit being adjusted.
- ② The TV program will not be recoded if RCA or 21pin plugs are played in the AUDIO/VIDEO input terminals.
- ③ The tracking control is enabled with the (▲)/(▼) button.

## ADJUSTMENT OF NTSC SYSTEM FV (False Vertical Sync) OF STILL PICTURE

Measuring instrument	Colour TV monitor
Mode	Playback still
Cassette	Self-recorded tape (SP/EP mode) (See Note below ①)
Control	Tracking control buttons (▲) or (▼)
Specification	No vertical jitter of picture

1. Play a cassette which was recorded by the unit in SP mode.
2. Press the PAUSE/STILL button to freeze the picture.
3. Adjust (▲) or (▼) TRACKING buttons until the vertical jitter of the picture minimized.
4. Play and freeze the self-recorded tape in SP mode and make sure vertical jitter of the picture is not noticeable.(For the EP mode adjustment is the same as SP mode.)

### Note:

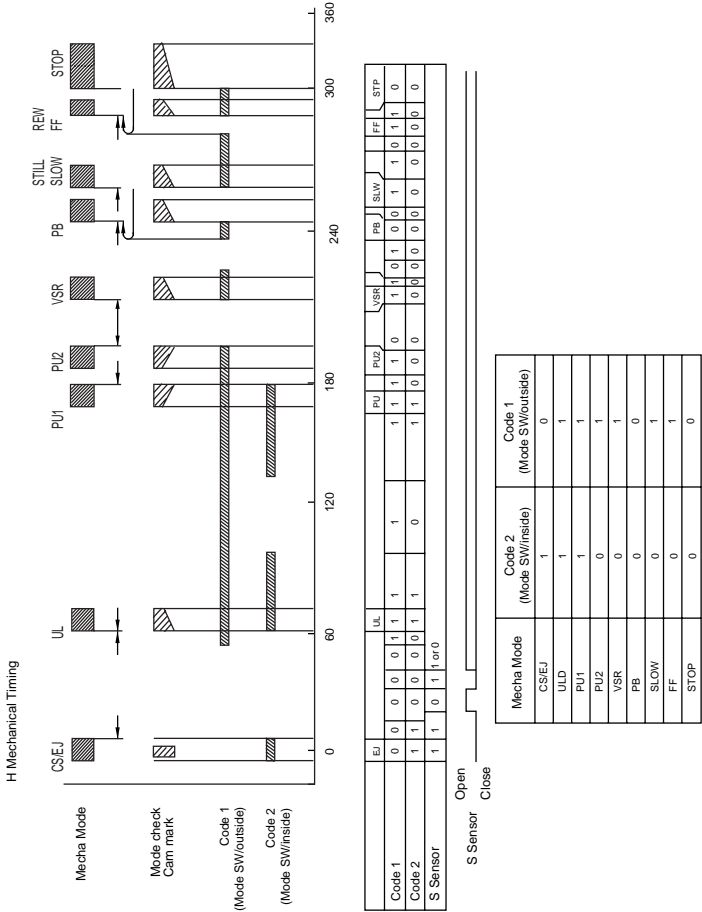

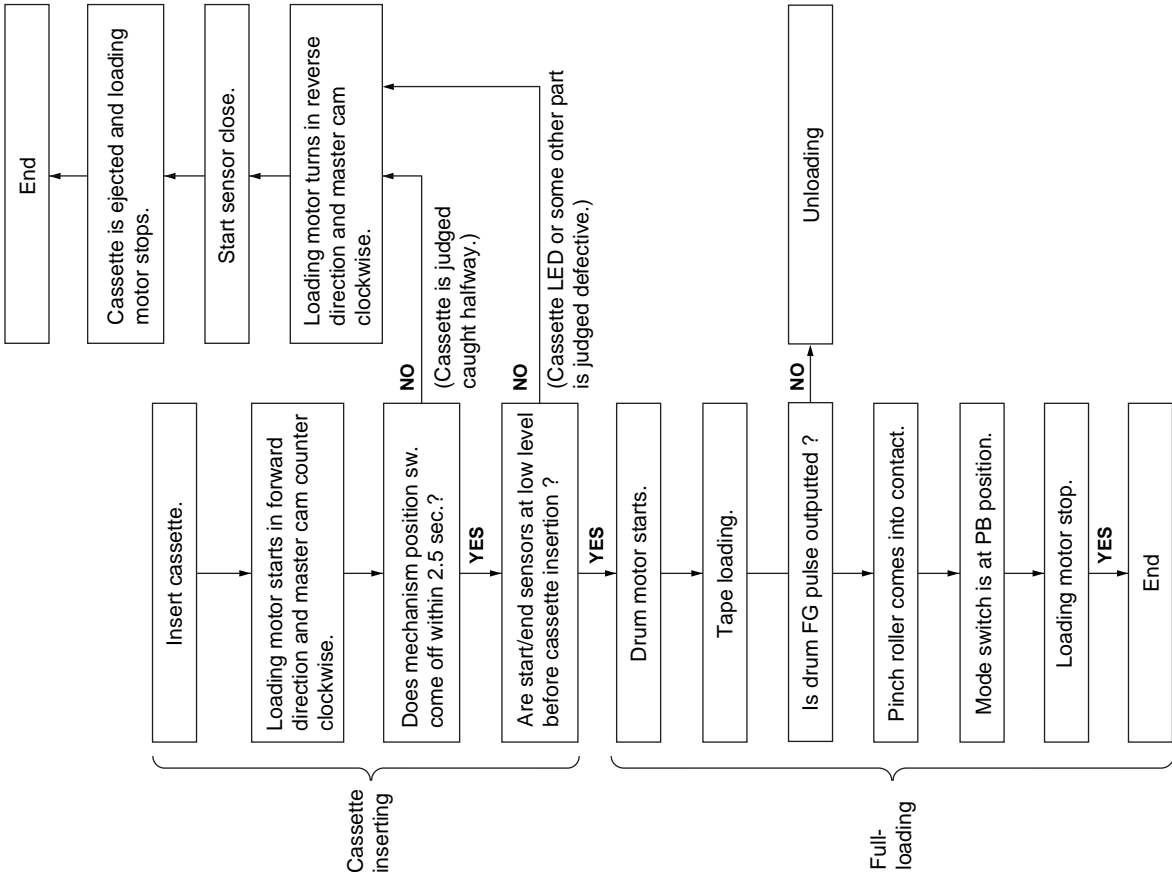

- ① Self-recorded tape is a cassette which program was recorded by the unit being adjusted.
- ② The tracking control is enabled with the (▲)/(▼) button.

## REPLACEMENT OF IC710(E<sup>2</sup>PROM)

«Servicing precautions»

When the IC710(E<sup>2</sup>PROM) has been replaced, make the following reprogramming.

Depending on models, the IC710(E<sup>2</sup>PROM) has been factory adjusted for it's memory function.

It's therefore necessary to reprogram the memory function for the model in question.

Note that the servo circuit requires readjustments for the slow and still modes.

### 1. Memory function reprogramming.

1. Check the power off.(Power is standby mode)

2. Make for moment short-circuit test point(TP801), located at the front side on the main PWB.

Be sure that all the LCD display light up into the TEST mode.

3. Using the CHANNEL(+ ) AND (–) buttons, select the right function numbers from JP0 to J39, which appear in the LCD display, referring to the E<sup>2</sup>PROM map.

Press the DISPLAY button to pickup the functions(ON) and the CLEAR button to discard the functions(OFF).  
DISPLAY and CLEAR buttons, are located on the remote control unit.

\* when the DISPLAY button has been pressed (ON), the memory function number starts flashing.

\* when the CLEAR button has been pressed (OFF), the memory function number lights up.

### 2. Memory recording preset level reprogramming.

1. Similarly to the above step 1-1 and 2 the same operate.

2. Using the CHANNEL (+) AND (-) buttons, select the right function numbers continued from recording preset number as has been JP0~J39, which appear in the LCD display, referring to the E<sup>2</sup>PROM map.

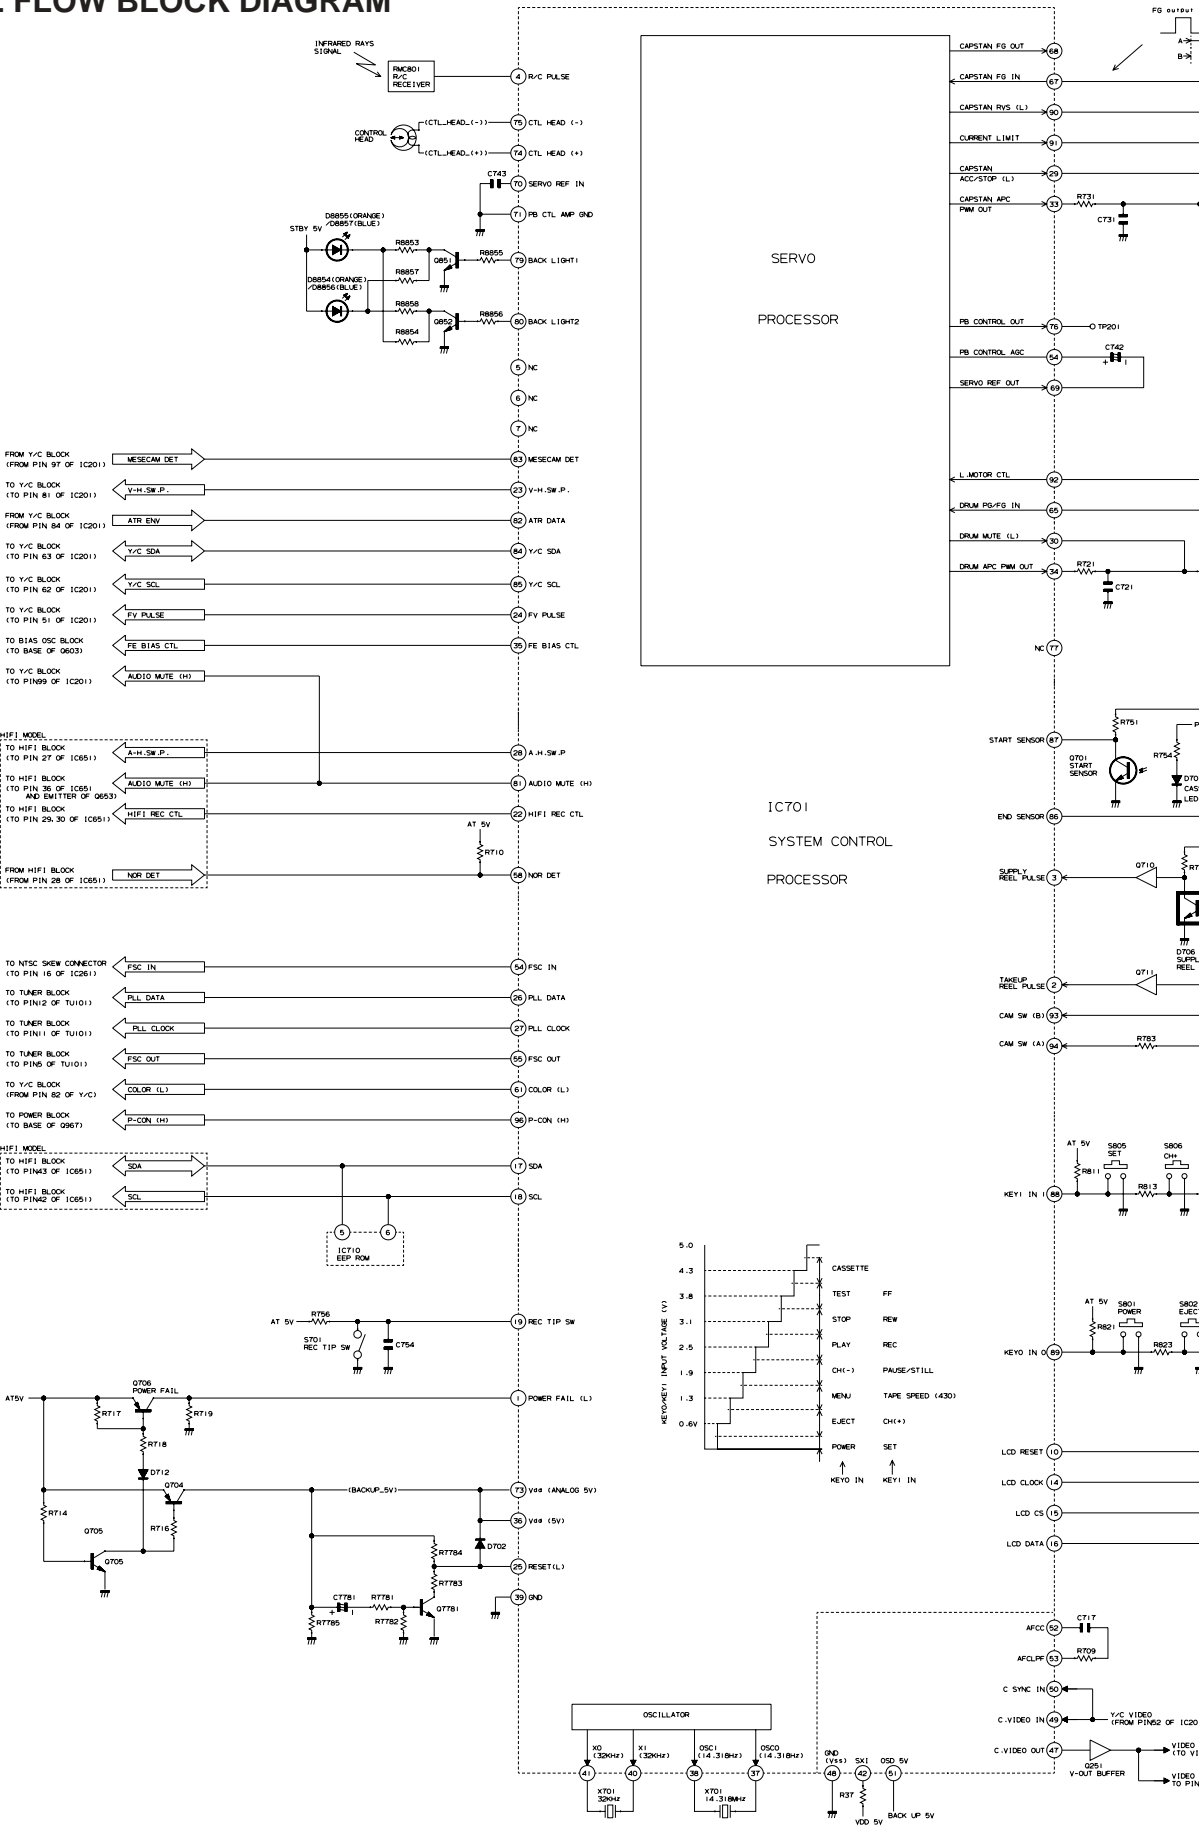

### 3. Finally make for a moment short-circuit test point(TP801), both located at the front side on the main PWB to clear the TEST mode.

## SCHEMATIC DIAGRAM

### IMPORTANT SAFETY NOTICE:

BE SURE TO USE GENUINE PARTS FOR SECURING THE SAFETY AND RELIABILITY OF THE SET.

PARTS MARKED WITH "  " AND PARTS SHADED (IN BLACK) ARE ESPECIALLY IMPORTANT FOR MAINTAINING THE SAFETY AND PROTECTING ABILITY OF THE SET.

BE SURE TO REPLACE THEM WITH PARTS OF SPECIFIED PART NUMBER.

### SAFETY NOTES:

1. DISCONNECT THE AC PLUG FROM THE AC OUTLET BEFORE REPLACING PARTS.
2. SEMICONDUCTOR HEAT SINKS SHOULD BE REGARDED AS POTENTIAL SHOCK HAZARDS WHEN THE CHASSIS IS OPERATING.

### NOTES:

1. The unit of resistance "ohm" is omitted ( $k=1000$  ohm,  $M=1$  Meg ohm).
2. All resistors are 1/8 watt, unless otherwise noted.
3. The unit of capacitance "F" is omitted ( $\mu=\mu F$ ,  $p=\mu\mu F$ ).
4. The values in parentheses are the ones in the PB mode; the values without parentheses are the ones in the REC mode.

### VOLTAGE MEASUREMENT CONDITIONS:

1. DC voltages are measured between points indicated and chassis ground by VTVM, with AC110~240V, 50/60Hz supplied to unit and all controls are set to normal viewing picture unless otherwise noted.
2. Voltages are measured with  $10000\mu V$  B & W or colour noted.

### WAVEFORM MEASUREMENT CONDITIONS:

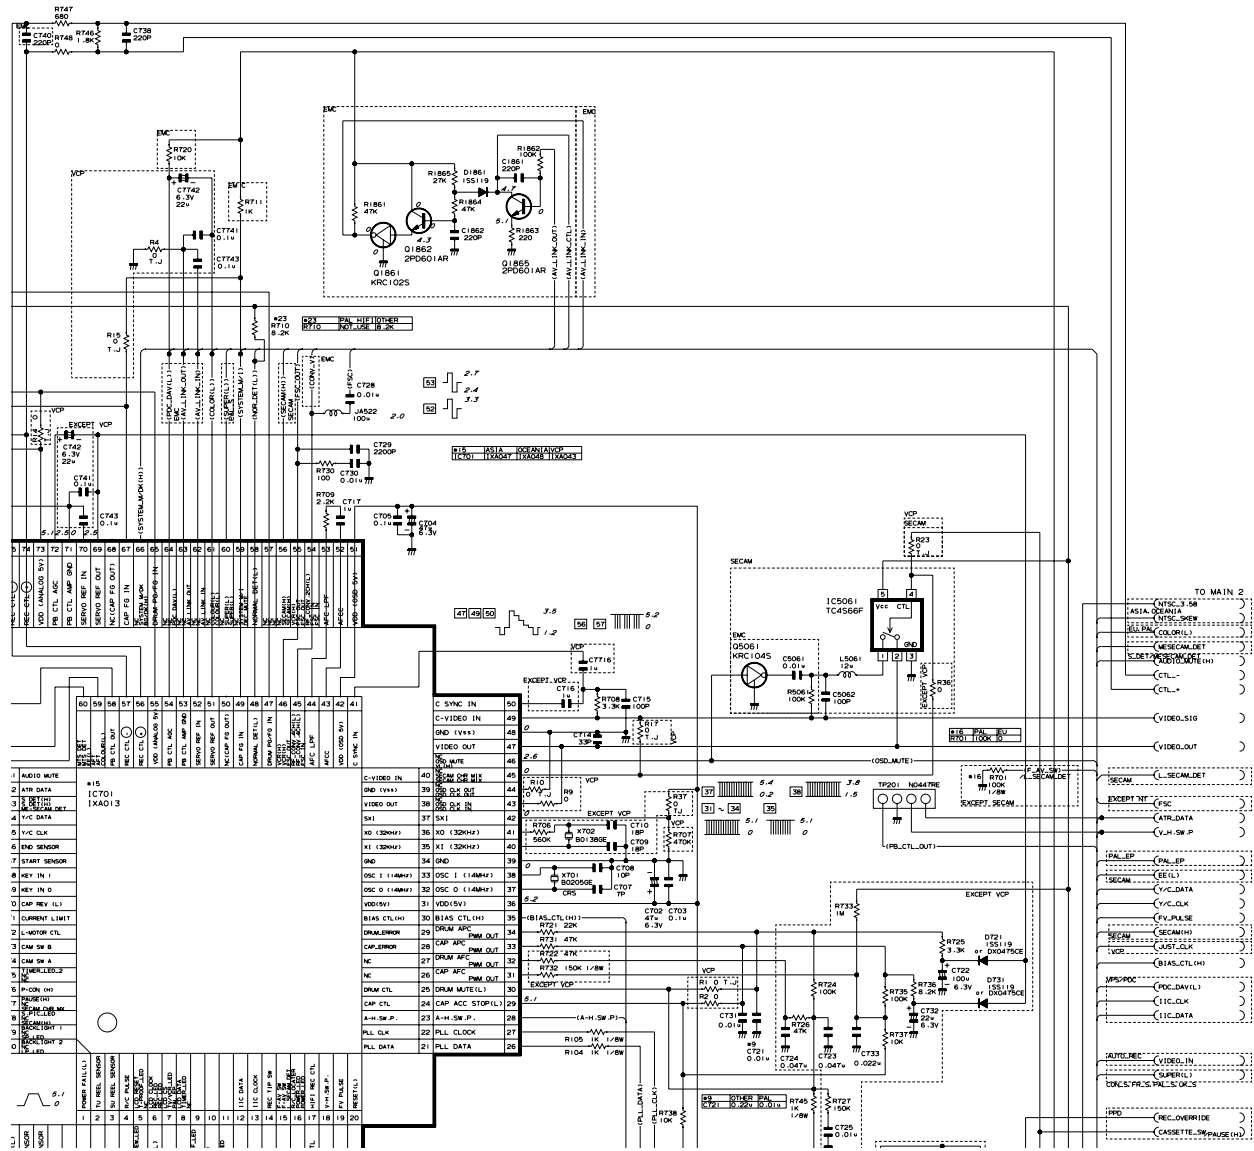

$10000\mu V$  87.5 percent modulated colour bar signal is fed into tuner.

### CAUTION:

This circuit diagram is original one. Therefore there may be a slight difference from yours.

## 10. REPLACEMENT PARTS LIST

### PARTS REPLACEMENT

Parts marked with "  " are important for maintaining the safety of the set. Be sure to replace these parts with specified ones for maintaining the safety and performance of the set.

#### " HOW TO ORDER REPLACEMENT PARTS "

To have your order filled promptly and correctly, please furnish the following informations.

- |                 |                |

## • Replacing the AHC (Auto Head Cleaner)

- How to remove  
Turn the H-AHC ass'y in the direction of (2), lifting the hook of the H-AHC ass'y in the direction of (1). When the hook is undone, pull out the H-AHC ass'y in the direction of (3).
- How to install  
Insert the H-AHC ass'y into the hole on the chassis in the direction of (4) and turn it in the direction of (5). Check that the chassis hook and hook of the H-AHC ass'y are engaged.

## \* Caution when replacing

- Do not allow the AHC ass'y to contact with the drum.
- Do not contaminate the cleaner section of the AHC ass'y with grease, etc.

# CASSETTE HOUSING CONTROL PARTS

CABINET PARTS (VC-A310X/NZ, H725X)

# CABINET PARTS (VC-H730X/NZ)

## FRONT PANEL PARTS (VC-A310X/NZ, H725X)

### PRECAUTION ON FRONT PANEL SET-UP

Before attaching the front panel in position, make sure that the cassette cover open lever is in its right place (lower-most). If it is out of position, push it down with a finger.

Keep the cassette cover about 45° open and make sure that the cassette cover open lever is between the front panel and the cassette cover. Now fix the front panel in place.

Do not mount the front panel with the cassette cover tilted too open. Otherwise the cassette cover might wrongly run on the cassette housing.

Removing the cassette compartment cover.

- ① Open the cassette compartment cover fully.
- ② Remove the center positioner.
- ③ Slide the cover to the right.
- ④ Slightly bend the cover.
- ⑤ Draw out the left-side rod.
